ooo

Web Developer Tools

We also created:

(note: in bank statements charges for tools appear as "browserling/onlinetool")

We're obsessed with making web developers' lives easier at Browserling, so we created a collection of the most popular developer tools all in one place. We love simplicity so we made them very simple and obvious how to use. There are no ads, bloated dialogs, or useless checkboxes. Just tools and all free. Press a button – get the result. These tools are also super useful for various cross-browser testing tasks. Here they are!

Like 51K

74M

Web tools

URL encode/decode, HTML escape/unescape, JSON prettify/minify, etc.

[EXPLORE](#)

Conversion tools

Convert between various data, file, encoding, text and number formats, etc.

[EXPLORE](#)

Encryption tools

Encrypt and decrypt text and strings. AES, RC4, ROT13, 3DES, etc.

[EXPLORE](#)

Hash tools

Calculate cryptographic hashes of text and strings. MD5, SHA1, etc.

[EXPLORE](#)

Password tools

Generate passwords for MySQL, PostgreSQL, bcrypt, scrypt, etc.

[EXPLORE](#)

Text tools

Modify, sort, convert, delete and filter text and strings, etc.

[EXPLORE](#)

Randomization tools

Generate random numbers, strings, UUIDs, Dates, IPs, etc.

[EXPLORE](#)

Image tools

Convert, crop, resize images. PNG, GIF, JPG, BMP, etc.

[EXPLORE](#)

Time and date tools

Convert between date formats, do date calculations, etc.

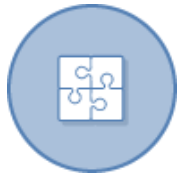

[EXPLORE](#)

Math tools

Do useful calculations, generate prime and Fibonacci numbers, etc.

[EXPLORE](#)

Other tools

Find my IP, display browser info, etc.

[EXPLORE](#)

All tools

See all tools in one giant list. There are over 100 tools!

[EXPLORE](#)

Here's a giant list of all tools. Ctrl+f is your friend to find the tool you're looking for.

URL Encode

URL encoder converts special URL characters in strings to safe percent-sign characters.

URL Decode

URL decoder converts percent-sign special characters in safe URL strings to regular strings.

URL Parse

URL parser splits an URL into components, protocol, hostname, port, link, domain, query string, hash, etc.

HTML Encode

HTML encoder converts certain characters to HTML entities

HTML Decode

HTML decoder converts HTML entities to normal characters.

Base64 Encode

Base64 encoder converts ascii/utf8/utf16 strings to base64-encoded strings.

Base64 Decode

Base64 decoder converts base64-encoded strings back to regular strings.

HTML Prettify

HTML prettifier converts ugly HTML into beautifully indented and nicely formatted HTML.

HTML Minify

HTML minifier compresses HTML to minimum by removing all unnecessary spaces, tabs and newlines.

JSON Prettify

JSON prettifier indents and formats JSON strings.

JSON Minify

JSON minifier removes all indents and spaces, and compresses JSON strings.

JSON Escape

JSON escaper escapes JSON strings and escapes special JSON characters.

JSON Unescape

JSON unescaper unescapes JSON-escaped strings and you get valid JSON.

JSON Validate

JSON validator validates JSON strings and shows errors if they're invalid.

JavaScript Prettify

JavaScript prettifier converts compressed and unreadable JS code into beautiful, pretty formatted code.

JavaScript Minify

JavaScript minifier removes unnecessary spaces, tabs and compresses JS code.

JavaScript Validate

JavaScript validator validates the code and shows errors if there are any.

CSS Prettify

CSS prettifier converts ugly, compressed CSS without spaces to nicely formatted and indented CSS.

CSS Minify

CSS minifier compresses CSS code by removing unnecessary indentation, spaces, tabs.

XML Prettify

XML prettifier converts ugly XML into beautiful XML.

XML Minify

XML minifier removes tabs, spaces and compresses XML to minimum size.

Convert XML to JSON

XML to JSON converter converts an XML data structure to JSON string.

Convert JSON to XML

JSON to XML converter converts a JSON data structure to XML string.

Convert XML to CSV

XML to CSV converter converts an XML data structure to CSV string.

Convert CSV to XML

CSV to XML converter converts CSV data to XML data structure.

Convert XML to YAML

XML to YAML converter converts an XML data structure to YAML data structure.

Convert YAML to XML

YAML to XML converter converts a YAML string to XML data structure.

Convert YAML to TSV

YAML to TSV converter converts an XML data structure to tab separated values (TSV).

Convert TSV to YAML

TSV to YAML converter converts tab separated strings (TSV) to XML.

Convert XML to TSV

XML to TSV converter converts XML to tab separated values (TSV).

Convert TSV to XML

TSV to XML converter converts tab separated strings (TSV) to XML.

Convert XML to Plain Text

XML to TXT converter converts an XML data structure to plain text string.

Convert JSON to CSV

JSON to CSV converter converts JSON data structure to CSV data.

Convert CSV to JSON

CSV to JSON converter converts CSV data to JSON data structure.

Convert JSON to YAML

JSON to YAML converter converts a JSON data structure to YAML data structure.

Convert YAML to JSON

YAML to JSON converter converts a YAML string to JSON data structure.

Convert JSON to TSV

JSON to TSV converter converts JSON to TSV (tab separated strings).

Convert TSV to JSON

TSV to JSON converter converts tab separated strings (TSV) to JSON.

Convert JSON to Plain Text

JSON to TXT converter converts a JSON data structure to plain text string.

Convert YAML to CSV

YAML to CSV converter converts a YAML string to CSV string.

Convert CSV to YAML

CSV to YAML converter converts a CSV string to YAML string.

Convert TSV to CSV

TSV to CSV converter converts tab separated strings (TSV) to comma separated strings (CSV).

Convert CSV to TSV

CSV to TSV converter converts comma separated strings (CSV) to tab separated strings (TSV).

Convert TSV to Text Columns

TSV to text column converter converts TSV data to neatly aligned text columns.

Convert Text Columns to TSV

Text columns to CSV converter converts space-separated text data to tab-separated text data.

Convert CSV to Text Columns

CSV to text column converter converts CSV data to neatly formatted text columns.

Convert Text Columns to CSV

Text columns to CSV converter converts simple space-separated column data to proper CSV.

Transpose CSV Files

CSV transposer transposes comma separated value files. Columns get transposed to rows and rows get transposed to columns.

Convert CSV Columns to Rows

CSV cols to rows converter converts columns to rows in CSV files.

Convert CSV Rows to Columns

CSV rows to cols converter converts rows to columns in CSV files.

Swap CSV Columns

CSV column swapper swaps any two columns in CSV files.

Extract CSV Column

CSV column extractor extracts columns from CSV files.

Delete CSV Column

CSV column deleter removes the given column from CSV files.

Prepend CSV Column

CSV column prepender adds a new column at the beginning of a CSV file.

Append CSV Column

CSV column appender adds a new column at the end of a CSV file.

Insert CSV Column

CSV column inserter inserts a new column between anywhere in an existing CSV file.

Replace CSV Column

CSV column replacer replaces one CSV column with a new column.

Change CSV Column Delimiter

CSV column delimiter changer changes comma separator to any other symbol or string.

Transpose TSV Files

TSV transposer transposes tab separated value files. Columns get transposed to rows and rows get transposed to columns.

Convert TSV Columns to Rows

TSV columns to rows converter exchanges columns and rows in TSV files.

Convert TSV Rows to Columns

TSV rows to columns converter exchanges rows and columns in CSV files.

Swap TSV Columns

TSV column swapper swaps any two columns in TSV files.

Extract TSV Column

TSV column extractor extracts columns from TSV files.

Delete TSV Column

TSV column deleter removes the specified column from TSV files.

Prepend TSV Column

TSV column prepender adds a new column at the beginning of a TSV file.

Append TSV Column

TSV column appender appends a new column at the end of existing TSV data.

Insert TSV Column

TSV column inserter inserts a new column anywhere in existing TSV files.

Replace TSV Column

TSV column replacer replaces the given TSV column with a new column.

Change TSV Column Delimiter

TSV column delimiter changer changes tab separator to any other symbol or string.

Extract String Delimited Column

String delimited column extractor extracts arbitrary columns from arbitrary delimited files, strings and text.

Delete String Delimited Column

String delimited column deleter removes arbitrary columns from arbitrary delimited files, strings or text.

Replace String Delimited Column

String delimited column replacer replaces a column in arbitrary delimited files, strings and text with a new column.

Swap Arbitrary Delimited Columns in Text

Arbitrary delimited column swapper exchanges any two columns in text and strings.

Change Separator of Arbitrary Delimited Columns

This tool changes the column separator of arbitrary delimited columns.

Transpose Arbitrary Delimited Text

Arbitrary delimited text transposer rotates text by 90 degrees. Columns get transformed to rows and rows get transformed to columns.

Truncate Text

Truncate text tool truncates every line of text to the given length.

Trim Text

Trim text tool trims every line of text, removing whitespace chars from beginning and end of lines.

Convert Text Data Columns to Rows

Text data columns to rows converter converts columns in text data to rows.

Convert TSV Rows to Columns

Text data rows to columns converter converts rows in text data to columns.

Convert HTML to Markdown

HTML to Markdown converter converts HTML to Markdown plain text.

Convert Markdown to HTML

Markdown to HTML converter converts Markdown text to HTML.

Convert HTML to Jade

HTML to Jade converter converts HTML to Jade markdown language.

Convert Jade to HTML

Jade to HTML converter converts Jade templating language to HTML.

Convert BBCode to HTML

BBCode to HTML converter converts Bulletin Board Code markup language to HTML.

Convert BBCode to Jade

BBCode to Jade converter transpiles BBCode markup language to Jade templating language.

Convert BBCode to Text

BBCode to text converter extracts text from BBCode markup code.

Convert HTML to Text

HTML to Text converter extracts plain text, numbers and strings from HTML.

Remove HTML Tags

HTML tag remover strips all HTML tags and leaves just the inner HTML text without tags.

Convert Text to HTML Entities

Text to HTML entities converts text and strings entirely to HTML special chars.

Convert UNIX time to UTC time

UNIX time to UTC time converter converts a UNIX timestamp to UTC time format. Useful if you store date as UNIX time in your database.

Convert UTC time to UNIX time

UTC time to UNIX time converter converts UTC time (and other time formats/zones) to UNIX timestamp.

Convert IP to Binary

IP to binary converter converts an IP address to a dot separated binary number.

Convert Binary to IP

Binary to IP converter converts IP addresses from a dot-separated binary format to a real IP address.

Convert IP to Octal

IP to octal converter converts an IP address to an octal IP and octal number.

Convert Octal to IP

Octal to IP converter converts IP addresses from octal numbers to human readable IP addresses.

Convert IP to Decimal

IP to decimal converter converts an IP address to a number. Useful if you store IPs as numbers in database, and need to convert between these formats.

Convert Decimal to IP

Decimal to IP converter converts IP addresses from a 32-bit integer to a real IP address.

Convert IP to Hexadecimal

IP to hex converter converts an IP address to a hex number and dot-separated hex IP.

Convert Hexadecimal to IP

Hex to IP converter converts hexadecimal IP addresses to a real dot-decimal IP addresses.

Sort IP Addresses

IP address sorter sorts Internet Protocol addresses in the right order.

Generate MySQL Password

MySQL password generator creates a MySQL PASSWORD() from your string.

Generate MariaDB Password

MariaDB password generator creates a MariaDB PASSWORD() from your string.

Generate PostgreSQL Password

Postgres password generator creates a PostgreSQL MD5 password from your username and string.

Generate bcrypt Password

Bcrypt password generator creates UNIX bcrypt password.

Check bcrypt Password

Bcrypt password checker checks if the given bcrypt hash matches the given password.

Generate scrypt Password

Scrypt password generator creates scrypt hash of a password with a salt.

Check scrypt Password

Scrypt password checker checks if the given scrypt hash matches the given password.

ROT13 Encode/Decode Text

ROT13 encoder/decoder transforms text using ROT13 algorithm, that shifts each letter by 13 positions.

ROT47 Encode/Decode Text

ROT47 encoder/decoder encrypts and decrypts text using ROT47 cypher, that shifts each letters, numbers and special symbols by 47 positions.

Base32 Encode Text

Base32 encoder converts text to human-friendly base32 encoding.

Base32 Decode Text

Base32 decoder converts a base32-encoded string to plain text.

Base58 Encode String

Base58 encoder converts strings and text to base58 encoding.

Base58 Decode String

Base58 decoder converts a base58-encoded data to plain text.

Ascii85 Encode Text

Ascii85 encoder converts text to Ascii85 (base85) encoding.

Ascii85 Decode Text

Ascii85 decoder converts an Ascii85-encoded string to plain text.

UTF8 Encode Text

UTF8 encoder converts ASCII and Unicode text (and strings) to UTF8 encoding.

UTF8 Decode Text

UTF8 decoders converts UTF8-encoded text back to ASCII or Unicode.

UTF16 Encode Text

UTF16 encoder converts ASCII and Unicode text and strings to UTF16 encoding.

UTF16 Decode Text

UTF8 decoders converts UTF16-encoded text back to ASCII or Unicode.

Punycode Encode

Punycode encoder converts text and strings to punycode.

Punycode Decode

Punycode decoder converts punycode back to readable text.

Uuencode

Uuencoder converts strings and text to uuencoded text.

Uudecode

Uudecoder converts uuencoded text back to regular string.

Convert Morse Code to Text

Morse Code to text convertor converts a message encoded in Morse code to text.

Convert Text to Morse Code

Text to More code convertor converts text and strings to More code encoding.

XOR-encrypt Text

XOR encryptor encrypts text using simple XOR binary operation.

XOR-decrypt Text

XOR decryptor decrypts XOR-encoded to plain-text.

AES-encrypt Text

AES encryptor encrypts text using AES algorithm. Useful for sharing private data quickly.

AES-decrypt Text

AES decryptor decrypts AES-encoded text to plain-text.

RC4-encrypt Text

RC4 encryptor encrypts text using RC4 algorithm.

RC4-decrypt Text

RC4 decryptor decrypts RC4-encoded text to plain-text.

DES-encrypt Text

DES encryptor encrypts text using DES algorithm.

DES-decrypt Text

DES decryptor decrypts DES-encoded text to plain-text.

Triple DES-encrypt Text

Triple DES encryptor encrypts text using Triple DES algorithm.

Triple DES-decrypt Text

Triple DES decryptor decrypts Triple-DES-encoded text to plain-text.

Rabbit-encrypt Text

Rabbit encryptor encrypts text using Rabbit stream cypher algorithm.

Rabbit-decrypt Text

Rabbit decryptor decrypts Rabbit-encoded text to plain-text.

Calculate NTLM Hash of a String

NTLM calculator generates NTLM checksum of text or string.

Calculate MD2 Hash of a String

MD2 calculator generates MD2 checksum of text or string.

Calculate MD4 Hash of a String

MD4 calculator generates MD4 checksum of text or string.

Calculate MD5 Hash of a String

MD5 calculator generates MD5 checksum of text or string.

Calculate MD6 Hash of a String

MD6 calculator generates MD6 checksum of text or string.

Calculate RipeMD128 Hash of a String

RipeMD128 calculator generates RipeMD128 checksum of text or string.

Calculate RipeMD160 Hash of a String

RipeMD160 calculator generates RipeMD160 checksum of text or string.

Calculate RipeMD256 Hash of a String

RipeMD256 calculator generates RipeMD256 checksum of text or string.

Calculate RipeMD320 Hash of a String

RipeMD320 calculator generates RipeMD320 checksum of text or string.

Calculate SHA1 Hash of a String

SHA1 calculator generates SHA1 checksum of text or string.

Calculate SHA2 Hash of a String

SHA2 calculator generates SHA2 checksum of text or string.

Calculate SHA224 Hash of a String

SHA224 calculator generates SHA224 checksum of text or string.

Calculate SHA256 Hash of a String

SHA256 calculator generates SHA256 checksum of text or string.

Calculate SHA384 Hash of a String

SHA384 calculator generates SHA384 checksum of text or string.

Calculate SHA512 Hash of a String

SHA512 calculator generates SHA512 checksum of text or string.

Calculate SHA3 Hash of a String

SHA3 calculator generates SHA3 checksum of text or string.

Calculate CRC16 Hash of a String

CRC16 calculator generates CRC16 checksum of text or string.

Calculate CRC32 Hash of a String

CRC32 calculator generates CRC32 checksum of text or string.

Calculate Adler32 Hash of a String

Adler32 calculator generates Adler32 checksum of text or string.

Calculate Whirlpool Hash of a String

Whirlpool calculator generates Whirlpool checksum of text or string.

Calculate All Hashes

All hashes calculator generates all hashes above at once.

Convert Seconds to H:M:S

Seconds to H:M:S converter converts clock seconds to hours:minutes:seconds format.

Convert H:M:S to Seconds

H:M:S to Seconds converter converts hours:mins:secs to clock seconds.

Convert Seconds to Human Time

Seconds to Human Time converter converts clock seconds to human readable time, such as years, months, days, hours, seconds.

Convert Binary to Octal

Binary to octal converter converts a binary number to an octal number in base 8.

Convert Binary to Decimal

Binary to decimal converter converts a binary number in base 2 to a decimal number.

Convert Binary to Hexadecimal

Binary to hex converter converts binary numbers to hexadecimal numbers.

Convert Octal to Binary

Octal to binary converter converts an octal number to a binary number.

Convert Octal to Decimal

Octal to decimal converter converts an octal number in base 8 to a decimal integer.

Convert Octal to Hexadecimal

Octal to hex converter converts octal numbers to hexadecimal numbers.

Convert Decimal to Binary

Decimal to binary converter converts a decimal number to a binary number.

Convert Decimal to Octal

Decimal to octal converter converts a decimal number to an octal number.

Convert Decimal to Hexadecimal

Decimal to hexadecimal converter converts a dec number in base 10 to a hex number in base 16.

Convert Hexadecimal to Binary

Hex to binary converter converts hexadecimal numbers to binary numbers.

Convert Hexadecimal to Octal

Hexadecimal to octal converter converts a hex number to an octal number in base 8.

Convert Hexadecimal to Decimal

Hexadecimal to decimal converter converts a hex number in base 16 to a decimal number in base 10.

Convert Decimal to Binary Coded Decimal

Decimal to BCD converter converts decimal numbers to binary coded decimal numbers.

Convert Binary Coded Decimal to Decimal

BCD to decimal converter converts binary coded decimals to decimals.

Convert Octal to Binary Coded Decimal

Octal to BCD converter converts octal numbers to binary coded decimal numbers.

Convert Binary Coded Decimal to Octal

BCD to octal converter converts binary coded decimals to octal.

Convert Hex to Binary Coded Decimal

Hex to BCD converter converts hexadecimal numbers to binary coded decimals.

Convert Binary Coded Decimal to Hex

BCD to hex converter converts binary coded decimals to hexadecimal.

Convert Binary to Gray Code

Binary to Gray code converter converts binary numbers to Gray code binary numbers.

Convert Gray code to Binary

Gray code to binary converter converts Gray code back to regular binary numbers.

Convert Octal to Gray Code

Octal to Gray code converter converts octal numbers to Gray code binaries.

Convert Gray code to Octal

Gray code to octal converter converts Gray code back to octal numbers.

Convert Decimal to Gray Code

Decimal to Gray code converter converts decimal numbers to Gray code binary numbers.

Convert Gray code to Decimal

Gray code to decimal converter converts Gray code back to decimal numbers.

Convert Hex to Gray Code

Hexadecimal to Gray code converter converts hex numbers to Gray code binary numbers.

Convert Gray code to Hex

Gray code to hex converter converts Gray code back to hex numbers.

Add Binary Numbers

Binary number adder calculates the sum of multiple binary numbers.

Multiply Binary Numbers

Binary number multiplier calculates the product of multiple binary numbers.

Calculate Binary AND Operation

Binary AND calculator computes bitwise AND operation on multiple binary numbers.

Calculate Binary NAND Operation

Binary NAND calculator computes bitwise NAND operation on multiple binary numbers.

Calculate Binary OR Operation

Binary OR calculator computes bitwise OR operation on multiple binary numbers.

Calculate Binary NOR Operation

Binary NOR calculator computes bitwise NOR operation on multiple binary numbers.

Calculate Binary XOR Operation

Binary XOR calculator computes bitwise XOR operation on multiple binary numbers.

Calculate Binary XNOR Operation

Binary XNOR calculator computes bitwise NXOR operation on multiple binary numbers.

Calculate Binary NOT Operation

Binary NOT calculator computes bitwise NOT operation of a binary number.

Invert Binary Bits

Binary bit inverter flips bits in binary numbers.

Reverse Binary Bits

Binary bit reverser reverses the order of bits in binary numbers.

Rotate Binary Numbers

Binary number rotator rotates binary numbers to the left or the right.

Rotate Binary Bits to the Left

Binary bit rotator circularly shifts bits in binary numbers to the left.

Rotate Binary Bits to the Right

Binary bit rotator circularly shifts bits in binary numbers to the right.

Convert Number Base

Number base converter converts a number in one base to another.

Convert Roman Numbers to Decimals

Roman numbers to decimal converter converts Roman numerals to decimal integers.

Convert Decimal Numbers to Roman

Decimal numbers to Roman converter converts Arabic numerals to Roman numerals.

Convert Numbers to Words

This tool converts numbers to English text.

Convert Words to Numbers

This tool converts English text to decimal numbers.

Convert Decimal Notation to Scientific

Decimal notation to scientific converter converts decimal numbers to their scientific normal form.

Convert Scientific Notation to Decimal

Scientific notation to decimal converter converts numbers in standard form to decimal numbers.

Round Numbers Up

Number up rounder rounds numbers up to the given precision.

Round Numbers Down

Number down rounder rounds numbers down to the given precision.

Convert Text Characters to ASCII Codes

Characters to ASCII codes converter converts each character in text or string to ASCII code points.

Convert ASCII Code to Text

ASCII code to text converter converts ASCII code points to a string.

Convert UTF8 Chars to Hex Code

UTF8 to hex converter converts UTF8 characters to hex numbers.

Convert Hex Code to UTF8 Chars

Hex to UTF8 converter converts hex numbers to UTF8 characters.

Convert Text to Bin

Text to bin converter converts text or string to binary string.

Convert Bin to Text

Bin to text converter converts a binary string to plain text string.

Convert Text to Oct

Text to oct converter converts text or string to octal string.

Convert Oct to Text

Oct to text converter converts octal data to plain text.

Convert Text to Dec

Text to dec converter converts text to decimal string.

Convert Dec to Text

Dec to text converter converts decimal numbers to string.

Convert Text to Hex

Text to hex converter converts text to hex string.

Convert Hex to Text

Hex to text converter converts a hexademical string to plain text.

Convert Text to Lowercase

Text to lowercase converter converts all characters in text and strings to lower case characters.

Convert Text to Uppercase

Text to uppercase converter converts all characters in text and strings to upper case characters.

Convert Text to Randomcase

Text to randomcase converter randomizes letter case in text and strings.

Convert Text to Titlecase

Text to titlecase converter converts text and strings to title case text.

Capitalize Words in Text

Text capitalizer uppercases first letter of every word in text and strings.

Invert Text Case

Text inverter inverts text case, uppercase to lowercase and lowercase to uppercase.

Convert Spaces to Tabs

Spaces to tabs converter replaces spaces to tabs in text and strings.

Convert Tabs to Spaces

Tabs to spaces converter replaces tabs to spaces in text and strings.

Convert Spaces to Newlines

Spaces to newlines converter replaces spaces with line breaks and you get columns of text.

Convert Newlines to Spaces

Newlines to spaces converter replaces line breaks with spaces and you a single blob of text.

Remove Letter Accents

Accent remover removes all diacritical marks in text and strings.

Remove Extra Whitespaces and Tabs

Whitespaces and tabs remover deletes all duplicate spaces, converts tabs to spaces and strips (trims) the text.

Remove All Whitespace, Tabs and Newlines

All whitespaces, tabs and newlines remover deletes absolutely all spacing and you get one big blob of text.

Remove Punctuation Symbols

Punctuation remover deletes all punctuation marks from text.

Add Thousands Separators

Thousands separator adder formats numbers and groups digits by thousands.

Add Backslashes

Backslash adder adds backslashes to escape quotes and backslashes in text and strings.

Unescape Backslashes

Backslash unescaper removes backslashes in text and strings.

Repeat Text

Text repeater repeats a string a given number of times.

Replace Text

Text replacer tool finds and replaces strings in text.

Reverse Text

Text reverser reverses text and strings.

Rotate Text

Text rotator rotates text and strings to the left or to the right.

Circularly Rotate Text to the Left

This tool circularly rotates characters in text and strings to the left.

Circularly Rotate Text to the Right

This tool circularly rotates characters in text and strings to the right.

Transform Text

Text transform tool converts and formats text and strings.

Center Text

Text centering tool centers text to the given width.

Right-Align Text

Text right-align tool aligns text and strings to the right.

Left-Pad Text

Text left-pad tool adds symbols to strings on the left.

Right-Pad Text

Text right-pad tool adds symbols to strings on the right.

Justify Text

Text justify tool justifies text on every line so all lines are equal length.

Format Text Columns

Text column formatter tool aligns all text in neat and even columns.

Calculate Text Length

Text length calculator finds the length of text or string.

Sort Text

Text sorter sorts lines of text and strings in alphabetical order.

Sort Numbers

Number sorter sorts lines of numbers in numeric order.

Sort Words

Word sorter sorts all words in a text and strings in alphabetical order.

Sort Lines by Length

Lines by length sorter sorts all text lines by their length ascending or descending.

Wrap Words

Word wrapper wraps text and strings to the given number of characters.

Split Words

Word splitter splits text into individual words and produces a single column of words.

Number Text Lines

Number text lines adds line numbers to each line.

Add Prefix to Text Lines

Prefix text lines tool adds prefix strings to every text line.

Add Suffix to Text Lines

Suffix text lines tool adds suffix strings to all text lines.

Append Prefix and Suffix to Text Lines

Prefix and suffix text tool appends both prefix and suffix at once to all text lines.

Find Longest Text Line

Longest text line finder finds the longest line in a blob of text.

Find Shortest Text Line

Shortest text line finder finds the shortest line among all text lines.

Remove Duplicate Lines

Duplicate line remover removes all repeated lines in a text blob leaving only unique lines.

Remove Empty Lines

Empty line remover removes all empty lines (that contain spaces, tabs, newline) in a text blob.

Shuffle Lines in Random Order

Line shuffler randomizes the order of text lines.

Shuffle Letters in Random Order

Letter shuffler randomizes positions of all characters in text and strings.

Merge Text Lines

Text line merger removes newlines and line breaks and joins all text lines together.

Split Strings

String splitter splits text by the given delimiter and produces columns of strings.

Reverse Text Line Order

Text line reverser flips the line order of text.

Filter Text Lines

Text line filter finds all lines that contain the given pattern.

Generate Strings from Regular Expressions

Strings from regex generates random text from a given regular expression.

Extract Regular Expression Matches from Text

Regex match extractor extracts strings, text and data from the given input that matches the given regular expression.

Replace Regular Expression Matches in Text

Regex match replacer substitutes all regular expression matches in the given text with the replacement string.

Extract All Emails from Text

All email extractor finds and extracts all email addresses from the given text or string.

Extract All URLs from Text

All URL extractor finds and extracts a list of all web links in text or string.

Extract All Numbers from Text

All number extractor finds and extracts a list of all numbers in text or string.

Merge Text Lists

Merge text lists tool joins two or more lists of text and produces a single concatenated list.

Zip Text Lists

Zip text lists tool joins two or more lists element by element.

Find Common Items in Lists

Find common items in lists compares two lists and finds all elements that are in both lists (it finds list intersection.)

Find Distinct Items in Lists

Find distinct items in lists finds all elements that don't overlap (it finds list symmetric difference.)

Printf/Sprintf Text Lines

Printf text lines tool formats every text line according to the given printf/sprintf format.

Grep Text Lines

Grep text tool finds all text lines that match a regular expression.

Head Text Lines

Head lines tool runs Unix head command on all text lines and returns first n lines.

Tail Text Lines

Tail lines tool runs Linux tail command on all text lines and returns last n lines.

Extract Line Interval

Line interval extractor returns all lines between two line numbers.

Count Number of Letters

This tool counts the number of letters in text or strings.

Count Number of Words

This tool counts the number of words in text or strings.

Count Number of Lines

This tool counts the number of lines in text.

Count Number of Paragraphs

This tool counts the number of paragraphs in text.

Letter Frequency Counter

Letter frequency counter calculates how many times each letter appears in a string or text.

Word Frequency Counter

Word frequency counter calculates how many times each word appears in a string or text.

Phrase Frequency Counter

Phrase frequency counter calculates how many times each phrase (of two or more words) appears in a string or text.

Text Information Tool

Text information tool provides statistics about text or string. It finds number of lines, words, sentences, paragraphs, characters, and gives character frequency breakdown (entropy info soon, too.)

Random Choice Picker

Random choice picker selects a random item from a list of elements.

Random JSON Generator

This tool creates a random JSON data structure.

Random YAML Generator

This tool creates a random YAML configuration files.

Random XML Generator

This tool creates a random XML document.

Random CSV Generator

This tool creates a random CSV file.

Random TSV Generator

This tool creates a random TSV file.

Random Password Generator

This tool creates a random password.

Random String Generator

This tool creates random text and strings from various formats.

Random Number Generator

This tool creates random integer numbers.

Random Decimal Fractions Generator

Random decimal fractions generator creates random real numbers with the given precision.

Random Binary Number Generator

Random bin number generator generates random binary numbers of arbitrary length.

Random Octal Number Generator

Random oct number generator generates random octal numbers of arbitrary length.

Random Decimal Number Generator

Random dec number generator generates random decimal numbers of arbitrary length.

Random Hex Number Generator

Random hex number generator generates random hex numbers of arbitrary length.

Random Byte Generator

This tool creates random bytes.

Random IP Generator

This tool creates random IP addresses.

Random MAC Address Generator

This tool creates random MAC addresses.

Random UUID Generator

This tool creates random UUIDs.

Random GUID Generator

This tool creates random GUIDs.

Random Date Generator

This tool creates random calendar dates.

Random Time Generator

This tool creates random clock times.

Prime Number Generator

This tool creates prime numbers.

Fibonacci Number Generator

This tool creates Fibonacci numbers.

Pi Digit Generator

Pi's constant generator computes π constant's digits to arbitrary precision.

Euler's Constant Digit Generator

Euler's constant generator computes e constant to arbitrary precision.

Convert JPG to PNG

JPG to PNG converter converts images in JPEG format to images in PNG format.

Convert PNG to JPG

PNG to JPG converter converts images in PNG format to images in JPEG format.

Convert GIF to PNG

GIF to PNG converter converts images in GIF format to images in PNG format.

Convert GIF to JPG

GIF to JPG converter converts images in GIF format to images in JPEG format.

Convert BMP to PNG

BMP to PNG converter converts images in BMP format to images in PNG format.

Convert BMP to JPG

BMP to JPG converter converts images in BMP format to images in JPEG format.

Convert an Image to Base64 String

Image to Base64 converter converts any image to base64-encoded string.

Convert a File to Base64

File to Base64 converter converts any file to base64 encoding.

Convert JSON to Base64

JSON to Base64 converter encodes a JSON data structure to base64 encoding.

Convert XML to Base64

XML to Base64 converter encodes an XML document to base64 encoding.

Convert Hex Color to RGB Color

Hex to RGB converter converts a color in hex format to RGB (decimal/integer) format.

Convert RGB Color to Hex Color

RGB to Hex converter converts a color in RGB format to Hex format.

Convert CMYK Color to RGB Color
